Art Unit: 3651

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The disclosure is objected to because of the following informalities: The specification such as on page 3 should not refer to the claims for its support.

The dependency of claim 48 should be changed from claim 46 to claim 47 in order to provide antecedent support for "the carrier".

Appropriate correction is required.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 30, 33, 34, 37, 38, 43, 45 and 46 are rejected under 35 U.S.C. 102(b) as being anticipated by Olsson (U. S. Patent 5,458,228).

Olsson shows a helical support having at least one bearing element 11 for supporting a belt 1, an endless section 19 for support the bearing element and the one bearing element is a roller bearing element comprising a plurality of rollers 21.

Re claim 33, the rollers receive vertical forces.

Re claim 34, the rollers will also receive radial forces.

Re claim 37, the rollers are alternately arranged.

Re claim 38, the rollers are spaced.

Re claim 43, the rollers are movable.

Re claims 45 and 46, Figure 7 shows a drive assembly.

Claims 31, 32, 35, 36, 39-42, 44 and 47-51 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 52-59 are allowed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James R. Bidwell whose telephone number is (571)272-6910.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene O. Crawford, can be reached on 571-272-6911. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
